Playground API

Input

Form Node.js Python Elixir HTTP Cog Docker

`image`* file

Drop a file or click to upload

breakfastattiffanys73.jpg

Take a photo with your webcam

Input image

`T` `prompt`* string

future downtown new york, Norwegian Seamen's Church, East 52nd Street, viking stave church, in parametric architecture, simple and spacious, mega-tall and regular size, every building similar and in harmony with its surroudings, extremely detailed facades, afternoon, cloudy

Prompt for the model

≡ num_samples string

4

Number of samples (higher values may OOM)

Default: "1"

≡ image_resolution string

512

Image resolution to be generated

Default: "512"

ddim_steps integer

20

Steps

Default: 20

scale number

(minimum: 0.1, maximum: 30)

9

Reset Run

seed integer

Seed

eta number

0

eta (DDIM)

0

T a_prompt string

best quality, parametric architecture, extremely detailed building facades, photorealistic, ultrarealistic, hyperrealistic

Added Prompt

Default: "best quality, extremely detailed"

T n_prompt string

low-res, 3d, complicated shapes, cropped, worst quality, low quality, roads, cars, pollution, vibrant colors, white or grey buildings

Negative Prompt

Default: "longbody, lowres, bad anatomy, bad hands, missing fingers, extra digit, fewer digits, cropped, worst quality, low quality"

detect_resolution integer

(minimum: 128, maximum: 1024)

512

Resolution for detection (only applicable when model type is 'HED', 'Segmentation', or 'MLSD')

Default: 512

value_threshold number

(minimum: 0.01, maximum: 2)

0.41

Value Threshold (only applicable when model type is 'MLSD')

Default: 0.1

distance_threshold number

(minimum: 0.01, maximum: 20)

2.78

Distance Threshold (only applicable when model type is 'MLSD')

Default: 0.1

Output

Running...
